

Square Face

Square face

A square-shaped face is the same width at the forehead, the cheeks, and the jaw.

IF YOU HAVE A SQUARE FACE:

- Highlight down the center of your forehead, underneath the eyes just on top of the cheekbones, and the tip of your chin to draw attention to the middle of your face.
- Contour your hairline at the two corners by your temples and the jaw at the two corners.
- Apply blush on the apples of your cheeks to help draw attention away from the corners of the square and help widen the area and make it appear more oval.
